10 Gigabit Optical Module Electrical Module

Overview

FS 10GbE SFP+ module solutions provide a wide variety of 10 Gigabit Ethernet connectivity options for data centers, enterprise wiring closets, Internet Service Providers (ISPs) applications.

Key Takeaways

10 Gigabit modules include optical SFP+ transceivers for fiber connections and 10GBASE-T modules for copper connections, offering flexible, high-speed network connectivity.

Overview10

G SFP+ Optical Modules are small, hot-pluggable transceivers designed for 10 Gigabit Ethernet connections over fiber or short-range copper. They are widely used in data centers, enterprise networks, and service provider environments for high-speed interconnects between switches, routers, and servers. 10GBASE-T Electrical Modules use RJ-45 interfaces to transmit 10Gbps over twisted-pair copper cables, suitable for short distances within racks or adjacent racks.

Optical Modules (SFP+)Form Factor: SFP+ (Small Form-Factor Pluggable Plus), backward-compatible with SFP slots but optimized for 10G. Data Rates: Typically 10Gbps, with some variants supporting 1G/2. 5G/5G for backward compatibility.

Connector Types: LC duplex for fiber or Direct Attach Copper (DAC) for short-range connections. Fiber Types and Distances: Multimode Fiber (SR): Up to 300m at 850nm wavelength. Single-mode Fiber (LR/ER/ZR): 10km (LR) to 80km (ER/ZR) at 1310/1550nm.

Power Consumption: Typically ≤1W, making them energy-efficient compared to older XFP modules. Applications: 10G Ethernet, Fibre Channel, data centers, enterprise networks, and telecom networks. Electrical Modules (10GBASE-T)Form Factor: SFP+ with RJ-45 interface.

Data Rates: 100M/1G/10Gbps, supporting legacy and high-speed connections. Cabling: CAT5e, CAT6A, or CAT7 twisted-pair cables. Distance: Up to 30 meters, ideal for intra-rack or adjacent rack connections.

Advantages: Cost-effective, easy to deploy without fiber infrastructure, hot-swappable for minimal downtime. Key DifferencesFeatureOptical SFP+Electrical 10GBASE-TMediumFiber (MMF/SMF) or DACCopper twisted-pair (CAT5e/6/7)Max Distance300m (MMF) to 80km (SMF)30mPower Consumption~1W or lessSlightly higher than opticalUse CaseLong-distance, high-density, low-latencyShort-distance, cost-effective, easy deploymentConnectorLC duplex or DACRJ-45Deployment ConsiderationsOptical SFP+ is preferred for high-density racks, long-distance links, and low-latency applications. 10GBASE-T is suitable for short-range connections where existing copper cabling is available, offering flexibility and lower upfront cost.

Compatibility: SFP+ modules are interoperable with XENPAK, X2, and XFP interfaces on the same link, while 10GBASE-T modules integrate seamlessly with standard Ethernet ports. Both module types support hot-swapping, digital optical monitoring (for optical modules), and “pay-as-you-populate” deployment models, allowing network scalability and investment protection. In summary, 10G SFP+ optical modules provide high-performance, long-distance connectivity, while 10GBASE-T electrical modules offer cost-effective, short-range solutions, giving network engineers flexibility to optimize 10 Gigabit Ethernet deployments based on distance, cabling, and application requirements.
