# 10G optical module RRU type

## Overview

10G SFP+ CPRI optical module is used for the base station. The base station can be divided into two modules: RRU for transmitting signals and BBU for processing signals. RRU is hung on the tower and BBU is in the machine room under the tower. The two are connected by optical fiber. For example, SFP-10G-BXD1 must be used with SFP-10G-BXU1. This top-of-the-line product, directly from Huawei, guarantees superior quality and reliability. 1KM, making it perfect for short-range data. 10GBASE-LR is a 10-gigabit Ethernet optical standard that operates at 1310 nm over single-mode fiber (SMF), supporting link distances of up to 10 km. 10G-LR module has become one of the most widely. Deployment flexibility with 800G (dual 400G), 400G, 100G, 50G, 40G, 25G, 10G or 1G modules.
