Bridge-type lifting frame

Overview

The Lifting Frame, also known as a Derrick Crane or Segment Lifter, is primarily used in the construction of precast segmental bridges via the balanced cantilever method. It is especially suitable for large-span cable-stayed bridges and bridges with small-radius curves. SDI Segment Lifter systems. Segment Lifter (referred to as bridge deck crane for pre-cast segment balanced cantilever construction) is mainly used for assembling construction of roads, cross river cross sea steel box beam of cable-stayed bridge, the equipment is installed on the bridge deck, and accurately and safely lift the. This construction method is adapted to long structures (deck span from 30m to 60m) with multiple spans; it combines the advantages of cantilever construction together with segment prefabrication. Combining the load-bearing strength of a launching gantry and the flexibility of a form traveler, it is ideal for the. Segment erctor, also known as segment lifter, in the context of bridge construction, is a specialized piece of equipment used to lift and place precast concrete segments in bridge construction projects.

Typical Lifting Frame

Typical Lifting Frame The Lifting Frame, also known as a Derrick Crane or Segment Lifter, is primarily used in the construction of precast segmental bridges via the

Segment Lifter|Huada Heavy Industry China Manufacturer

Segment lifter also called bridge builder or Lifting frame, mainly adopts balance cantilever construction method for precast segment bridge construction and widely used in cable-stayed bridge.

Freyssinet Precast segmental erection methods

The method is based on the use of launching beams, beam launchers or lifting frames capable of receiving prefabricated beams (I-, U- or T-beams) behind, below or parallel to the erection system.

Bridge Deck Lifter

The bridge deck lifter, also known as a bridge builder or bridge segment lifting frame, is a modern lifting solution designed specifically for segmental bridge construction.

SEGMENT ERECTOR LIFTER

Segment erctor, also known as segment lifter, in the context of bridge construction, is a specialized piece of equipment used to lift and

Lifting frames | Deal

DEAL supplies both conventional and new generation lifting frames. The latter are suitable for cable-stayed bridge construction and allow for safe and extremely

Lifting Frames

Segment lifting frames are specialized equipment used in bridge construction, particularly for precast segmental decks. They are designed to lift and position

Balanced Cantilever Construction of Precast Segmental

The discussion explores balanced cantilever construction of precast segmental bridges with self-launching gantries and lifting frames.

SEGMENT LIFTERS (SL), DERRICK CRANES (DC) & GANTRY CRANES (GC ...

NRS has developed several types of Segment Lifters (SL) and Derrick Cranes (DC) system tailored for the various erection requirements of

Crane Frame Kits | KUNDEL

© 2026 QK FIBER SYSTEMS - All rights reserved

Two types are available, ridged system that gives precise compact smooth movement, and our standard articulated bridge movement giving effortless quick

The Load Case: Hydraulic Lifting Frames

Hydraulic lifting frames and other conventional methods reach their limits when constructing large railway bridges or raising an overturned ship such as the

Freyssinet Precast segmental erection methods

Balanced cantilever erection with launching gantry or lifting frames, Span by span or Precast girder erection, Full span precast method, etc.

Best A Frame Crane Models for Your Lifting Needs

Required lift height Lifting speed Power supply Taking these factors into account will help determine the appropriate lifting capacity for specific lifts

Microsoft Word

Lift Bridges

Lift bridges are suitable for great spans, but their clearance is limited by the lift towers, which have a great impact on the environment, even when the bridge is closed (Figure 17.4). The cables linking

Design and Evaluation of Multi-storey Lifting Frame Bridge Based ...

This paper aims to propose an innovated design of automated container terminal (ACT) handling system, which can help the port to enhance the handling performance of the entire terminal. Different

Design and Evaluation of Multi-storey Lifting Frame Bridge Based ...

Design and Evaluation of Multi-storey Lifting Frame Bridge Based Automated Container Terminal Handling System Ting Fang, Wei Yan, Youfang Huang, Junliang He and Danping Lin Engineering

Segment Lifter |Shenghua Heavy Crane Group China

Shenghua Heavy Crane Group has developed several types of bridge deck erection system segment lifter customized for the various erection requirements and
