Nbn optical cable

Overview

The NBN Fibre Optic Cable is the key infrastructure behind Australia's National Broadband Network (NBN). It's designed to deliver fast and reliable internet by using fibre optic technology, which transmits data as light signals through thin strands of glass or plastic. All types of nbn network connections that utilise a physical line running to the premises are considered Fixed Line connections. We have invested more than AU$14M in our Dee Why (NSW) production facility specifically for nbn, which ensures long term local supply of fibre optic and copper cables to Australia's biggest infrastructure project, the national e cables yo ave them for sure. If you're looking to upgrade your broadband or want to learn more about this revolutionary technology, this article has you covered. It outlines the nbn® Requirements for Customer Installed Fibre Cable Pathways and provides guidance on meeting these requirements to allow inst an will always accommodate reasonable customer requests.
