Optical Coupler Voltage Comparator Module

Overview

The LM393 Voltage Comparator Module is designed to compare an input voltage with an adjustable reference voltage and generate a digital output signal. How to Design Isolated Comparators for ±48V, 110V and 240V DC and AC Detection (Rev. Examples include power supply and battery monitors, and receivers of status signals from sensors, switches and relays. An optocoupler, also known as photocoupler or opto-isolator, is a device which can transfer an electrical signal across two galvanically-isolated circuits by way of optical coupling. Unlike transformers or capacitors, which can only transfer AC signals across the isolation barrier, optocouplers can. For more than 50 years, Broadcom® optocouplers have been used in an array of isolation applications, ranging from power supply and motor control circuits to data communications and digital logic interface circuits. The primary purpose of an optocoupler is to provide both electrical insulation and. Use imported groove coupler sensor Groove Width: 5mm Output state indicator lights Obscured output high; unobstructed output low The comparator output, the signal is clean, the waveform, driving ability, more than 15mA Operating Voltage: 3. 3V-5V The output in the form: Digital switching outputs (0. The LM2903 chip is a core hysteresis voltage comparator control module. There are three speed levels to allow you to optimize for speed or power consumption. You can also connect a reference or external.
