Fiber optic cable rewind

Overview

vom Hagen & Funke GmbH – Rewinding vHF supplies a range of cable rewind and test lines from basic designs to fully automated lines including length measuri.

Key Takeaways

Rewinding fiber optic cable requires careful handling to prevent damage, using proper techniques and respecting minimum bend radii.

Key Principles

Fiber optic cables are sensitive to excessive bending, pulling, or crushing, which can cause microbends or signal loss. Always follow the minimum bend radius specified by the manufacturer and avoid applying excessive tension during rewinding. Inspect the cable for damage before starting, and ensure the work area is clean and free of obstacles.

Manual Rewinding Technique

Determine Roll Diameter: The minimum roll diameter should be at least 10 times the cable diameter (e.g., a 5mm cable → roll diameter ≥ 50mm) to prevent fiber stress. Use a Figure-8 or Circular Pattern: For long cables, a Figure-8 pattern helps prevent tangling and uneven tension. Loose circular turns are also acceptable for shorter lengths.

Gradual Rolling: Roll the cable slowly and evenly, avoiding sharp bends. Secure the cable with soft cable ties that are not too tight. Avoid Twisting: Keep the cable untwisted and aligned with the natural lay of the fibers to prevent internal stress.

Mechanical Rewinding (Spooling)For larger or industrial spools, use a level winding drive or respooler designed for fine-gauge materials. Adjust the traverse stroke length carefully to ensure even layering and prevent crossovers. Always check that the spool or reel is free of defects and that the cable is guided smoothly onto the drum.

Safety and Precautions

Wear personal protective equipment such as gloves and eyewear. Do not exceed the maximum pulling tension specified for the cable. Avoid crushing or kinking the cable, as this can permanently degrade performance.

Inspect the cable after rewinding for any microbends, kinks, or damage before installation or storage.

Summary

Rewinding fiber optic cable safely involves maintaining proper bend radius, using controlled rolling techniques, and avoiding mechanical stress. Manual Figure-8 rolling is suitable for short runs, while mechanical spooling with a level winding drive is recommended for longer or industrial-length cables. Following these practices ensures the cable remains functional and free from damage.

Article Content

vom Hagen & Funke GmbH – Rewinding

vHF supplies a range of cable rewind and test lines from basic designs to fully automated lines including length measuring units capable of being certified by the state Weights and Measurements office. The

High Speed Rewinding Machines

For fast and precise rewinding of fiber optic cables or optical fibers, our high-speed rewinding machines offer the ideal solution. With winding speeds of up to 1000

REWINDING MACHINE

Developed for the fast and accurate rewinding of optical fibers, fiber optic cables and delicate filaments, these systems achieve winding speeds of up to 1000 m/min, all while ensuring exceptional tension

Winder and spooler, winding machine for fibre, glass fibre, coal fibre ...

Supertek offers solutions for various areas of the fibre industry in the fields of filling technology, automation, machine and plant engineering and winding technology.

Automatic rewinder with precise tensile force and exact

© 2026 QK FIBER SYSTEMS - All rights reserved

Our rewinding machines are ideally suitable for precise unwinding, winding and rewinding very thin, delicate wire, flat wire, fibre glass, fibre optic cables, fibres,

Winding Machines | Products and Machines by Supertek

Supertek - the most high precision winding machines for fine wire or optical fiber! Perfect machines for coil winding, spooling, rewinding, unwinding, payoff and

Fiber Optic Cable Winding & Spooling

The RG Kinemax traverse drive is uniquely well suited to spooling a wide range of fine gauge materials from including monofilament, fiber optic cable and

Rewinding machines

Rewinding machines manufacturer for cable, wire, optical fiber and flexible materials. For industrial speed, tension control and perfect winding layers.

Optical Fiber Cable rewinding Machine

This production line (Fiber Optic Cable Rolling Machine, Optical Fiber Cable Winding Machine) is used for rewinding optical cable to be smaller reels. It can

High-Speed Precision Winding of Fiber Optic Coils

Newton developed a camera, custom lens and illuminator system on a high-speed, three-axis motion stage to control complex windings of optical fiber coils.

Optic fiber rewinder

Types of optic fiber rewinders An optic fiber rewinder, also known as an optical fiber winding machine, is used to rewind optical fibers or cables onto spools or reels. According to different classification

REWINDING MACHINE

REWINDING MACHINE - HIGH SPEED Ultra-Fast | Ultra-Precise | Ultra-Customizable When speed meets precision, Supertek''s high-speed rewinding systems deliver performance without compromise.

Fibre optic cable reels

21 Fibre optic cable reels Fibre optic cable reels with different barrel diameters and winding widths. The barrel is coated with PE foam

Modular Advanced Reel Systems (MARS®)

OCC''s Modular Advanced Reel System (MARS ®), the industry''s first lightweight cable deployment reel system, is designed specifically for the demanding needs

Winding Machines | Products and Machines by Supertek

© 2026 QK FIBER SYSTEMS - All rights reserved

Winding machines with the best winding technology Supertek - the most high precision winding machines for fine wire or optical fiber! Perfect machines for coil

Fiber Rewind and Proof Testing Equipment

Individually Configurable A range of versatile, high speed tensile proof test and rewind equipment for today''s high performance optical fibers. Lines are individually configured from SGC''s standard range

Cable rewind stations

Cable rewind stations Windak designs and manufactures a wide spectrum of machinery for the wire and cable industry. The company provides companies

Optical-Fiber Proof Test & Re-wind Equipment

Optical-Fiber Proof Test & Re-wind Equipment, BH Services LLC is the sales arm of CONTROLS INTERFACE Ltd in the UK. Controls Interface Limited is the former HEATHWAY Ltd management
