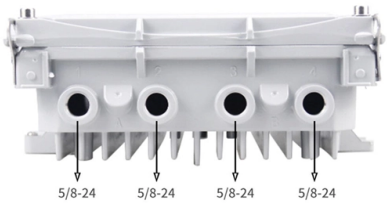
# Reflow Soldering Module



## Overview

Reflow process soldering is one of the most widely used assembly techniques in modern electronics manufacturing. From consumer devices to automotive control modules, the reflow process soldering workflow allows engineers to achieve consistent joints, high throughput, and repeatable. Reflow soldering is a crucial process in today's Surface Mount Technology (SMT), enabling the secure mounting of parts ranging from the smallest 0201 passives to complex, high-density Ball Grid Arrays (BGAs). With the ongoing reduction in component sizes, accurate heat management has become a. In surface mount technology (SMT), reflow soldering is a process that melts solder paste to permanently attach electronic components to printed circuit boards (PCBs). PCBONLINE is an OEM PCB assembly manufacturer. Power modules from Infineon are designed to be assembled onto PCBs using a reflow soldering process. The recommendations in this document apply to the LG-MLGA-72-5 and LG-MLGA-72-6 packages.
