Spectrometer Cuvette

Overview

How To Choose The Right Cuvette: 2026 Lab Guide These instruments are critical in a range of analytical techniques, such as UV-Vis spectrophotometry, fluor.

Key Takeaways

A cuvette is a small, transparent vessel that holds liquid samples and allows light to pass through for accurate spectrophotometric or fluorescence measurements.

Definition and Function

A cuvette is not just a container; it is a precision optical component integral to a spectrometer's light path. It enables the measurement of absorbance, transmittance, or fluorescence by allowing light to pass through the sample while maintaining optical clarity and consistent path length, which directly affects measurement accuracy and reliability.

Materials

Cuvettes are made from different materials depending on the wavelength range and chemical compatibility: Quartz (Fused Silica): Ideal for UV-Vis spectroscopy, transmitting light from 190–2500 nm. Resistant to most chemicals and reusable, essential for UV measurements below 340 nm. Optical Glass: Suitable for visible light (340–2500 nm).

More affordable but not transparent in the UV range. Plastic (Polystyrene or PMMA): Cost-effective, often disposable, but limited chemical resistance and unsuitable for UV below 350 nm.

Types and Shapes

Cuvettes come in various shapes and sizes to accommodate different experimental needs: Standard Cuvettes: Typically hold ~3. 5 mL, square or rectangular. Micro Cuvettes: Small volumes (70 µL–1 mL), used in high-throughput screening.

Semi-

Micro Cuvettes: Intermediate volume (~1. 5 mL) bridging standard and micro sizes. Fluorescence Cuvettes: Usually have three or four clear sides, with the detector at a 90° angle to the light source to measure emitted light accurately.

Path Length and Optical Considerations

The optical path length (Z-dimension) is critical for accurate absorbance readings. High-quality cuvettes have precise path lengths with minimal tolerance (±0. 01 mm) to ensure reproducibility.

Any scratches, fingerprints, or material absorption can introduce significant errors.

Additional Features

Some cuvettes include: Screw caps or stoppers: Prevent evaporation and contamination. Air-tight seals: Maintain inert conditions for sensitive samples. Flow-through designs: Allow continuous measurement for kinetic studies.

Applications

Cuvettes are used in: UV-Vis Spectrophotometry: Measuring light absorption or transmittance across UV and visible ranges. Fluorescence Spectroscopy: Measuring emitted light at specific angles to the incident beam. Routine Laboratory Analyses: Protein assays, bacterial culture optical density, and chemical concentration measurements.

Selecting the correct cuvette involves considering material, path length, volume, and optical quality to match the spectrometer and the experimental requirements, ensuring precise and reproducible results.

How To Choose The Right Cuvette: 2026 Lab Guide

These instruments are critical in a range of analytical techniques, such as UV-Vis spectrophotometry, fluorescence spectroscopy, and others that

Spectroscopy Cuvettes and Cells | Fisher Scientific

Browse a full range of Spectroscopy Cuvettes and Cells products from leading suppliers. Shop now at Fisher Scientific for all of your scientific needs.

What is a Cuvette? A Guide to Spectrophotometer

The ultimate guide to laboratory cuvettes. Learn what a cuvette is, how to choose the right material (quartz, glass, or plastic), understand path length, and its use in

UV/Vis Cuvettes | Glass and Quartz Cuvettes | METTLER TOLEDO

The cuvette used to measure a sample is a part of the spectrophotometer''s optical system. Therefore, the position, geometry and condition of the cuvette can have an influence on the accuracy and

UV-vis Spectrophotometer Cuvette Selection Guide

Choosing a correct cuvette for UV VIS range measurements can be crucial for laboratories utilizing. Not all cuvette materials or types will work for every experiment, so some basic

7 Things to Consider When Ordering Cuvettes – eCuvettes

7 Things to Think About When Ordering a Cuvette The cuvette holds the sample and the cuvette is placed in a spectrophotometer for spectral analysis, but the

How To Choose The Right Cuvette: 2026 Lab Guide

Quartz vs glass, micro vs standard, 1-100mm path length — pick the right cuvette in 60 seconds. 474-instrument compatibility matrix + 25 FAQ. ISO

Cuvettes Selection Guide: Types, Features, Applications | GlobalSpec

Cuvettes are filled with samples, usually diluted or suspended in liquid, and placed within a spectroscopy device, such as a colorimeter, electroporator, fluorometer, spectrometers, spectrophotometer, or

Spectrophotometer Cuvettes: Quartz, Glass & Plastic | Qvarz

Choosing a cuvette for your spectrophotometer? Compare quartz, optical-glass and disposable plastic cells by wavelength, path length and price. In stock at Qvarz.

Spectrophotometers UV/Vis | Micro-Volume & Cuvette-Based

UV/Vis spectrophotometers offer superior optical design and unparalleled performance across a wide range of applications including micro-volume measurements.

193 results for Spectrophotometer Cuvettes | VWR, part

The small cuvettes securely hold substances to study the ability for electromagnetic radiation absorbed or emitted. Spectrophotometer cuvettes are manufactured in

Types of Cuvettes and Cells

Screw Cap Spectrometer Cuvettes Screw Cap Standard Spectrophotometer Cuvettes, Rectangular Spectrophotometer cuvette cells with

Spectrophotometer Test-tube Cuvettes ~11.6 mm | Request for Quote ...

Modern methods (and instruments) generally rely on square cuvettes with a highly reproducible pathlength, optical surfaces that are perfectly perpendicular to the instrument light beam, and have a

Cuvettes | (SLS) Scientific Laboratory Supplies

Cuvettes are used for the precise analysis of samples, particularly in spectrophotometry and other optical measurements. Designed to hold small volumes of liquid, cuvettes allow light to pass through

Cuvettes and uv-cuvettes for spectroscopy

Disposable plastic cuvettes for the UV/VIS range are ideal for the photometric determination of proteins, ssDNA, dsDNA or RNA. Contaminations are reduced

Spectroscopy Cuvettes and Cells

Spectroscopy cuvettes and cells are supplies used for spectrophotometry, which measures how much a sample absorbs light. Products include Sterilin cuvettes

Spectrometer Cuvettes | Ocean Optics

Ocean Optics offers a wide range of plastic and quartz cuvettes for your absorbance and fluorescence needs. CVD Series plastic cuvettes are versatile, no

Spectrophotometer Cuvettes: Quartz, Glass & Plastic | Qvarz

Learn about the types, materials, and roles of cuvettes in spectrophotometry and fluorescence spectroscopy. Find out how to choose the right cuvette for your experiment and how to calibrate the
