What does a network patch panel module look like

Overview

An Ethernet patch panel is typically a metal frame with rows of RJ45 ports on the front and punch-down or keystone terminations on the rear. They come in a range of sizes, and are typically mountable, whether that's on a wall, or on a rack to make for easier. A patch panel is a passive hardware unit that consolidates multiple network connections in one location. It provides a clear overview of how the network is structured, allowing network administrators to easily troubleshoot and manage the network. Unlike active devices that process data, a patch panel simply provides structured termination points for each Ethernet cable run, creating a clean, scalable.
