Network rack temperature control fan

Overview

It is a method used in data centers to control the temperature of IT equipment right at the rack level. It stops overheating by blowing cold air to the front and pushing hot air out from the back of cabinets. Use blanking panels to cover empty spaces, arrange cables to keep airflow clear, use hot/cold aisle containment strategies, and employ rack mount cooling solutions like exhaust fans, vents, liquid cooling, or heat exchangers for the best. The four high volume cabinet fans pump out 300 CFM of air through a top exhaust, providing a healthy flow stream to keep your setup cool. The server cooler system is controlled by an easy to use, user-friendly programmable controller set through an LCD display screen, which is used to monitor the. Keep your equipment cool with fans by NavePoint. Designed with efficiency, quiet operation, and durability in mind, this fan module is ideal for protecting network equipment from overheating.
