Sf6 distribution box

Overview

TGXR6-12 series SF6 fully insulated and fully sealed metal-enclosed ring network switchgear (SF6 fully insulated ring main unit) is a gas-insulated medium-voltage switchgear with threephase AC 50Hz and rated voltage of 12kV. Equipped with fully sealed SF6 ring main unit (RMU) modules, this model ensures maintenance-free operation, enhanced safety, and rapid fault isolation in cable distribution. Combined type of transformer substation is a kind of complete set product integrating voltage switch equipment and transformer with LV distribution equipment. It is usually applied to civic architectures, residential districts, factories, mine and oil fields used as transformer and distribution. DFW8-12/630 series cable branch box with load switch adopts SF6 gas-insulated three-position load switch, with external American/Europeanstyle full-insulation cable joint, the inlet and outlet wires of switch areled out from the sleeve. Suitable for underground distribution system of 3-12kV, it is. DILO's path in SF 6 gas handling started in 1967, when we supplied a complete piping system for installation of the first SF 6 gas insulated switchgear. Since then, our product portfolio has successively been developed to the widest product range of emission-free gas handling equipment worldwide. com and order power distribution equipment that you like. This product adopts a high-performance sulfur hexafluoride load switch with built-in SF6 insulating gas and a touch-shielded imported synthetic rubber cable joint. It has strong breaking ability of active load and no-load cable current and closing ability of short-circuit current.
